Art Unit: 1754

Claims 1-5 and 7-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jain et al in view of Bolme or Herbrechtsmeier et al or Lassman et al, further in view of Tamony et al, even further in view of either Sheu et al '950 or Sheu et al '125, still further in view of Larue et al, for the reasons given in the last Office Action. Applicant's argument, that applicant uses a liquid form of the adsorbent, is not convincing, since applicant's claims do not require that the first filter be in solid form. The recitation of "a mixture of hydroxides of alkali and alkaline earth metals" would not exclude the aqueous solutions of alkali and alkaline earth metal hydroxides disclosed at col. 4, lines 13-43 of Jain et al. Applicant's argument, that the quoted patents clearly do not teach the same temperature limitations present in this invention, is not convincing, since claims 1 and 4-12 do not recite a temperature limitation. Regarding claims 2 and 3, Jain et al disclose at col. 4, lines 31-35 that the temperature at which the aqueous scrubbing step is carried out is not critical, and is typically carried out at temperatures of about 10° to about 90° C. It would be obvious from such disclosure of Jain et al to carry out the process at a temperature below 200° K.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 2 and 3 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed,

Art Unit: 1754

had possession of the claimed invention. There is no "description support" in the original specification for maintaining the temperature in the first filter between 50 and 200 degrees Kelvin.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 8 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The recitation of "selected by the group consisting of..." is improper Markush terminology.

The specification is objected to under 37 CFR 1.74 in failing to include a "Brief Description of Drawings". See MPEP 608.01 (f).

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 1754

the advisory action: In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
